Most sewing machines are now computerized and will give you an error message, which will help you determine where the problem lies. Computerized codes will tell you the probable cause and the solution. Sewing Machine Does Not Work Check that the machine is plugged in and that the main power switch is turned on. The machine will also not work if the bobbin winder shaft is pushed to the right or if you are not using the foot controller properly. Needles Break Make sure the needle is fitted properly and that the needle clamp is not loose. Bent or blunt needles will also cause needle breakage. If everything else is OK, make sure you have the right size needle for the thickness of the fabric. Using the wrong presser foot for different types of stitches will also cause needle breakage. Check the owner's manual or the computer screen readout to make sure you have the proper presser foot for the stitch you have programmed in. Other things that may cause needle breakage include scratches around the hole in the needle plate, pulling the fabric too tight, a scratched bobbin case and the wrong bobbin type for the machine. Thread Breakage Make sure the machine is threaded properly and that there are no knots or tangles in the thread.

Check the needle to make sure you are using the proper needle for the thickness of the thread. If the thread tension is too tight, the upper thread will also break. A bent or blunt needle will cause thread breakage in addition to needle breakage. Skipped Stitches If you are noticing skipped stitches, make sure the upper thread is threaded properly and that the needle is not blunt or bent. Remove the needle plate and clean any dust out from under the plate or in the bobbin case. Brother Computer Codes E1 Make sure the presser foot is lowered before sewing. E2 You chose a stitch other than a buttonhole stitch or a bar tack stitch and you tried to sew with the buttonhole lever in the lowered position. Raise the buttonhole lever. E3 If you selected the buttonhole or tack bar stitch and start to sew with the buttonhole lever raised, you will get the E3 code. Lower the buttonhole lever. E4 You hit the reverse button while the bobbin winder shaft was moved over to the right. Move the bobbin winder shaft to the left. Unplug the foot controller if you are using the automatic function. E6 This code tells you that the motor locked up because the thread is tangled. Untangle the thread, make sure the machine is threaded properly and that the proper tension is set before continuing. So whether on or off, the status of the system is clear. The world of sewing involves specific lingo you just can't get away from, with terms such as bias, hem, tension, bobbin, etc.

The Operation Manual, which not only explains use of the machine, has a section dedicated to sewing basics to become familiar with a lot of the these terms. Having control over these settings, though, is convenient and extremely simple to adjust. There is an automatic sewing feature no presser foot used, and I have the ability to adjust the sewing speed a slider which is a nice control feature too. I did this countless times on my old machine, messing up pieces of fabric, jamming my needles, and wasting time. There are also numbers with directional arrows clearly showing the path for threading the machine, something I always had a hard time remembering on my older machine because I only sew once in a while, I usually forget how to thread it by the next project. Also, all the special, fancy stitches are clearly displayed on the front, which their stitch number right above the illustration. The only thing problematic with this, though, is certain stitches require different foots. It doesn't tell me this information on the machine itself, so I have to refer to that stitch in the Operation Manual to make sure I am using the correct foot. There are 59 different stitches, so there is no way I am going to remember which foot to use for each one. If the foot information each foot has a unique letter was displayed alongside the stitches, it would definitely minimize my memory load and save me time from referring to the manual. Since there aren't a bunch of fancy options or capabilities, there aren't any accelerators or shortcuts because it only performs basic sewing functions. There are only a handful of buttons on the unit, all clearly labeled which is nice. A sewing machine can be a fairly complicated device, but this particular machine, being a beginner model, was designed accordingly. If an error occurs, E1, E2, E3, E4, E5, or E6 displays on the digital screen and it beeps 3 times. Then, I have to refer to the Operation Manual to see what that specific error means.

To some this may be annoying, but I don't mind too much. At least it's giving me a specific message that I can easily look up. Each error has a definite solution, so it is always something I can easily fix. Because I am a novice sewer anyway, I keep the Operation Manual by me at all times to look up sewing techniques demonstrated in the booklet. Though it could have been better designed, I have used it as a reference countless times. It is divided into four easy to find sections knowing your sewing machine, sewing basics, utility stitches, and appendix. On the troubleshooting page, it says, "If the problem is still there, contact your retailer or the nearest authorized service center." I would have to do some research online to find this information. Tags heuristics, usability. I wish that sewing machines could be as easy to use as my iMac that I gush about on my post. My machine is an older model that offers no real assistance. Anytime I use it, I have to refer to the user manual time and again to figure out what I need to do. It sounds like your model is more user friendly with the diagrams on top of the machine, minimal buttons, safety check with the presser foot, etc. At least it

Enjoy the video for more features and a more in depth review of this sewing machine.

There are a lot of reviews that state there are problems with the tension on this machine, and yes, I am finding that to be an issue. It seems that it doesn't matter how I adjust the tension, it just won't get it right. I have tried googling the problem and doing all of the required things changing thread, changing the needle, changing the bobbin, etc, and nothing seems to work. There is a feature on the machine that when you stop stitching, it does one more stitch to finish in the down position you can change it to finish up as well, when the machine does that, I am left with a large loop in my line of stitches. Since I like many of the other features, and this is a new machine, it looks like I will have to have it serviced still under warranty, so I hope they can fix it. Otherwise, the machine is quiet, I find the light to be just the right brightness, threading and winding the bobbin are easy, and I really love the adjustable speed control. Essentially, you get what you pay for. If you sew on a weekly basis or do a lot of heavy duty sewing, this may not be the right machine for you. If you sew occasionally as a hobby or just to mend items, then this machine will work just fine. Assuming you can get the tension problems solved. Number one thing is that you MUST thread the machine with the needle AND presser foot in the UP position. I used to thread my old machine with the foot down so that I could see the needle better, but for this machine, it is essential that it be in the up position. I am having to sew with a tension between 3 and 4 for basic fabrics, and that helps a lot. Also, in my review above, I stated that when the needle finishes in the down position, I was getting strange loops in my thread. I changed that so that the needle finishes in the up position instructions are in the manual, and that has solved that problem. So, don't give up! It might be a pain to solve some of these problems, but well worth it once they are fixed!

At first I loved it, so quiet, easy to use, very user friendly. But then I got a persistent E6 error. I looked at Brother's website and did everything they recommended to try and fix it but the error persisted. I was desperate to finish some sewing projects so I took my machine to a local repair shop. It turns out one of the bearings in the machine WAS RUSTED and prevented the machine from properly working. This bearing is not in a location where the user could properly clean, oil and maintain it which I have always cleaned my machine to make sure I don't get issues like this. It is a risk to buy this machine. I have emailed Brother and will see what they say. No power, no stitch options, and just felt cheap. I was very skeptical of this one because it was the same brand and not much more expensive, but wow. This hands down has to be the best value around for a sewing machine that comes with several stitch options and a lot of computerized perks. Threading the needle and bobbin is a breeze. The only complaint I have is that the fastest speed isn't very fast, especially on a zig zag stitch. All in all, if you're doing basic sewing, I highly recommend!! This is my first machine. I've successfully created many pieces with it. See photos for 2 of the things I've made. PROs This machine is so easy to thread once you get the hang of it. At first, you have to take your time and get to know the machine, but I can fill a bobbin in 60 seconds and thread this baby up in 10 seconds. Automatic buttonhole maker is a breeze! Fun too. Great value for your money. BUT I'm finding that if I change the presser foot, I am having better luck with thicker materials. I was also having tension issues, but I figured out that the default presser foot was just not giving me any room for the fabric. On this machine, you cannot adjust the lower tension or presser foot tension. I've solved my problems by using specialized presser feet. Bought a universal set of like, 25, for a good price on this website.

Like all machines, the light is useless. Sew in the daylight. It gets dragged down there, knotted in the bobbin thread, occasionally. I have to be wary when working with lace fabric, delicate silk types, or just at the ends of fabric pieces in general. About a year and a half ago, I discovered cosplay, and I've been sewing my own costumes since. My old machine was struggling after so many years, and I wanted options like fancy stitches and onestep buttonholes. This machine absolutely stepped up to the task. I can see through multiple layers of vinyl, not at top speed, but still at a decent clip, the fancier stitches look gorgeous, and I love the little extra features that I've never experienced before. The see-through bobbin case is a big plus for me, as I love being able to double-check that I have enough thread. The needle threader, which I've never had before, works like a charm, and it takes me barely twenty seconds to retread my machine now. It's also way quieter than my old machine, and just has a nice sound about it. All of the accessories that came with it work well. The walking foot is a revelation, and my new favourite toy when sewing stretch fabric. As aforementioned, it's really easy and quick to rethread the machine. There's a sticker with a simple diagram up top, and each piece that you use when threading the machine is numbered. It's pretty easy to switch out needles and feet. The computer part works well; I have no issues scrolling quickly through the stitches, and I appreciate that it tells you which foot to use for which stitch. I've sewn through a lot of different types of fabric, and this machine has held up well under all of them. I wanted something that was multipurpose but had more options than my ancient Singer offered. This one was a fantastic choice, and I'm really glad it's the one I got. Sorry, we failed to record your vote. Please try again I know absolutely nothing about sewing machines.

She gets mad at me every time I buy her something expensive. She didn't get mad at me this time. Must be a really good sewing machine. Sorry, we failed to record your vote. Please try again I would never consider buying any other brand. This machine is so easy to use, and for recreational use, is an awesome machine for the cost. It has renewed my interest in sewing, and I haven't stopped using it since I got it. Love It! Highly recommended! Sorry, we failed to record your vote. Please try again Does work well, there were some complaints related to thick folded fabric jeans, I found that it can handle but for big jobs I would not recommend it. Incluye instructivo en espanol y es muy facil de aprender sobre su uso, ademas de los tutoriales que hay en Youtube. Una de las funciones que mas me gusto es que tiene un mecanismo para enhebrar la aguja, ademas que cose los ojales automaticamente con solo colocar el boton en el pisatelas incluido para tal proposito. La uso todos los dias. Es especial para acolchado. Sorry, we failed to record your vote. Please try again Smooth running, quiet and very easy to use. Sorry, we failed to record your vote. Please try again I did have some difficulty in going through. I did have some difficulty in going through the seams of jeans that I was hemming, even if I was using the recommended needle size. The automatic threader doesn't work all the time, and I have to give it an extra push to the left side. But overall, an amazing machine to learn on! Sorry, we failed to record your vote. Please try again I absolutely love it. Its really easy to use and it works very well. Ive done all kinds of projects on it and I couldnt be happier with the results and functionality. Sorry, we failed to record your vote. Please try again Love the stitch selection. Having some trouble with the foot pedal being slow to react though. Sorry, we failed to record your vote. Please try again Great for quilters on a budget. Is not as sturdy as more professional machines but allows you to do SO MUCH on a budget. I use mine to make cage liners for my rats and makes using tough to sew fabrics like fleece a breeze to run through the machine with the walking foot. Sorry, we failed to record your vote.
